The influence of level of sports competition on personality traits of national, state, and all India university women players

Sangeeta S Patil and Dr. Sakpal Hoovanna

Abstract

The purpose of the present research was to describe and compare the personality traits of Group and individual game players represented at state, national, and all India university level of sports. The method of the study is descriptive analyses, total 300 (Each 100) samples including both in individual and group game players were selected as sample and To collect the data the standardized scale devised by Dr Ajith Sing has administered on the subject who are participating in state, national, and all India interuniversity tournament, later 't' test was applied to assess the significant difference in various factor of personality traits between sportswomen of individual and group game, the conclusion was drawn that group game sportsperson have possessed the high sociability personality traits comparing to their counterpart, it was rationalized that nature of group participation develops and Cultivates the social values and character among the participants.

Keywords: Level of sports competition on personality traits between national, state, and all India University level women players

Introduction

Personality including dimensions of extraversion, Sport psychology has emerged as a field with a personality including dimensions of neuroticism, research tradition that provides a foundation for direct extraversion, openness, agreeableness and application with athletes. As the role played by conscientiousness, two that have supported both psychological factors in the performance and over well- theoretical and empirical by a large number of researches being of athletes has become better understood, in the last decades. Numerous studies have intervention have been designed to favorably affect examined the relations between five factor model athlete behavior throughout their involvement in sport dimensions and sport activities; these studies suggest and beyond]. Sport psychology researchers have been that there is a positive correlation between sport interested in how athletes' psychological an activities, extraversion and conscientiousness and also a characteristics influence performance. From this point, it negative correlation between sport activities and clear that psychological characteristics differ between neuroticism. Also the results of studies connected with more and less effective athletes and teams. Moreover, the Three-dimensional model of personality have shown ability to mentally prepare is considered a key component correlation between sport activities with one or more of such differences. The optimal level of skills in dimensions of low neuroticism, high extraversion and low championship depends on three factors; physical, skill psychotics. Koon (1965) believed sportsmen and mental preparation. It seems that champion's different women are extraversion and there is a significant relation performance depends on mental preparation, influence of between sport abilities and extraversion rate. It is obvious psychology and personality of sportsmen. So it needs to higher abilities have related with extraversion and lower compare the relationship between psychological variables abilities with introspection. Some findings have found (personality) in different sports. This matter would help different results in this case.

Hypotheses

It was hypothesized that the nature of participation leads to develops different Kind of personality traits among individual and group game players

Objective

1. To assess the significant differences of personality between State, National, and All India Inter-University Women Players
2. To know the correlation exist between the nature of game and level of Competition and personality traits.

Materials and methods

The present research is descriptive which compares and assess the influence of level of sports on personality traits of individual and Group game participants, the participants of the present research are belonging the group game and individual athletes those are participating in different level of tournaments. The sample was selected using purposive random technique; 100 subjects of each group as individual and group sportswomen were selected from were evaluated and compared using seven factor inventory.

Measurement Tools

To collect the requisite data, the standard zed questionnaire constructed by Dr Ajith Sing has administered on the sportswomen of individual and group game, who are participating in State, National, and All India University Level Women tournament held at different part of the country.

Data analysis

First descriptive statistics including means and standard deviation and ‘t’ test and correlation used for describing the personality traits of athletes and group game. The seven primary personality dimension identified by DrAjith Singh are described as being functionally independent and psychologically meaningful dimensions of a person’s personality. The primary personality factors that are sociability as taken to prepare research article, hence, sociability has

Analyzed and described as follows.

Discussion of the Tables

The hypothesis that the group game sports person will have a better social ability than the individual game sportswomen is framed on the rationale that the nature of game and participation is believed to be a prime creator of personality traits of individuals, which also includes the social adjustment. Because normally, the Group Game sportswomen would naturally have advantage over her counterpart as the she enjoys social interaction, receives more social experience, gets the more rich exposure she gains, would all influence and promote greater amount of characteristics that fit her in a highly stable mentality in which she could easily adjust socially himself to the different occasions and rich experience of social and matches would determines personality traits and psychological factors comparing to individual game

Table 1: Pair wise comparisons of interaction effect of levels of participation (State, National, All India University) and types of games (Group and Individual game) on component of personality i.e. sociability scores of sportswomen by Turkey’s multiple posthoc procedures

Interactions	State level with group game	State level with individual game	National level with group game	National level with individual game	All India University level with group game	All India University level with individual game

- Sportswomen of state level with group game and sportswomen of national level with group game differ with respect to sociability scores of personality at 5% level of significance. It means that, the Sportswomen of state level with group game have higher sociability scores of personality as compared to sportswomen of national level with group game.
- Sportswomen of state level with group game and sportswomen of national level with individual game do not differ with respect to sociability scores of personality at 5% level of significance. It means that, the Sportswomen of state level with group game and sportswomen of national level with individual game have similar sociability scores.
- Sportswomen of state level with group game and sportswomen of All India university level with group game differ with respect to sociability scores of personality at 5% level of significance. It means that, the Sportswomen of state level with group game have higher sociability scores of personality as compared to sportswomen of All India university level with group game.
- Sportswomen of state level with group game and sportswomen of All India university level with individual game differ with respect to sociability scores of personality at 5% level of significance. It means that, the Sportswomen of state level with group game have higher sociability scores of personality as compared to sportswomen of All India university level with individual game.
- Sportswomen of state level with individual game and sportswomen of national level with group game differ with respect to sociability scores of personality at 5% level of significance. It means that, the Sportswomen of state level with individual game have higher sociability scores of personality as compared to sportswomen of national level with group game.
- Sportswomen of state level with individual game and sportswomen of national level with individual game differ with respect to sociability scores of personality at 5% level of significance. It means that, the Sportswomen of state level with individual game have smaller sociability scores of personality as compared to sportswomen of national level with individual game.
- Sportswomen of state level with individual game and sportswomen of All India university level with group game do not differ with respect to sociability scores of personality at 5% level of significance. It means that, the Sportswomen of state level with individual game and sportswomen of All India university level with group game have similar sociability scores of personality.
- Sportswomen of state level with individual game and sportswomen of All India university level with individual game differ with respect to sociability scores of personality at 5% level of significance. It means that, the Sportswomen of state level with individual game have higher sociability scores of personality as compared to sportswomen of All India university level with individual game.
- Sportswomen of national level with group game and sportswomen of national level with individual game differ with respect to sociability scores of personality at 5% level of significance. It means that, the Sportswomen of national level with group game have smaller sociability scores of personality as compared to sportswomen of national level with individual game.
- Sportswomen of national level with group game and sportswomen of All India university level with group game differ with respect to sociability scores of personality at 5% level of significance. It means that, the Sportswomen of national level with group game have higher sociability scores of personality as compared to sportswomen of All India university level with group game.
- Sportswomen of national level with group game and sportswomen of All India university level with individual game differ with respect to sociability scores of personality at 5% level of significance. It means that, the Sportswomen of national level with group game have higher sociability scores of personality as compared to sportswomen of All India university level with individual game.
- Sportswomen of national level with individual game and sportswomen of All India university level with group game differ with respect to sociability scores of personality at 5% level of significance. It means that, the Sportswomen of national level with individual game have higher sociability scores of personality as compared to sportswomen of All India university level with group game.
- Sportswomen of national level with individual game and sportswomen of All India university level with group game differ with respect to sociability scores of personality at 5% level of significance. It means that, the Sportswomen of national level with individual game have higher sociability scores of personality as compared to sportswomen of All India university level with group game.
- Sportswomen of All India university level with group game and sportswomen of All India university level with individual game differ with respect to sociability scores of personality at 5% level of significance. It means that, the All India university level with group game have higher sociability scores of personality as compared to All India university level with individual game.

Conclusion

The participation in sports activities develops harmonious personality traits among the participants, the study also proved and expressed the fact the group game has advantages to cultivate the social values and positive personality traits in the sportswomen, comparing to their counterpart group and level of participation effected in developing personality traits among the women's players.
