Attitude of parents toward female sports in Haryana: A study

Balvinder Singh

Abstract

A research study was conducted to know about the participation of Haryana girls and women in sports and philosophy of Haryana. The population of this study was different school students' parents of District Kaithal. Total 200 respondents selected from within the population through convenient or available sampling technique. For the purpose of collection of data a structured questionnaire on five point Likert scale, ranging from strongly disagrees to strongly agree, was prepared and handed over to 400 respondents with the help of teachers in physical education of concerned schools. The main objective of the study was to know about the participation of girls and women in sports and philosophy of Haryana. The result of the study indicated that parents like sports and their opinion about women sports are good. The result of the study further confirmed that Haryana people philosophy about women sports is now changing day by day.

Keywords: Haryana, sports, women, sports participation

Introduction

In all this procedure women do not have any say they induce to do according to the wish of their husbands even if she does not desire to abort her have any alternative. With the help of these social reformers, women of India slowly started seeing her true potential. She set about questioning the rules set down for her by the society. The Indian woman's focus of this is a new Olympic, constructed along a former industrial site at Stratford in the Next Olympic Sports. The Games also make employment of many venues which were already in place before the bidding. The participation of women and girls in sport challenges gender stereo-types and discrimination, and can therefore is a vehicle to promote gender equality and the empowerment of women and girls.

Population of the study

The population of this study was different school students' parents of District Kaithal. Total 200 respondents selected from within the population through convenient or available sampling technique.

Sampling Technique

Convenient or available sampling technique was applied.

Sample Size

A Sample of 100 parents (total no-200) was selected from the population.

Data Collection Instrument

To examine the participation of Haryana girls and women in sports and physical activities a structured questionnaire with 12 statements on three point Likert scale, ranging from "Strongly Disagree" to "strongly agree" was developed for collection of data.
