## To compare the educational attitude of senior secondary students of government and private schools

**Surinder Kumar**

### Abstract

The purpose of the study was to compare the educational attitude of senior secondary students of Government and Private schools. This study was conducting on Orientation towards Physical Education and Sports of Government and Private Sector relation to their Educational Attitude. Data was collected from Government and Private Sector school Student of 11th and 12th class student's boys and girls. For better understanding of the research objective, data were collected and analyzed from 40 Government and 40 Private sector school students for a total of 80 students. Total sample was 80 and equally distributed in Government (40) and Private (40). After collected the data were analyzing on SPSS. All the hypothesis was accepted in this study. Government and Private school student Educational Attitude was significant difference between Private school students. The mean score of Government and Private Sector School population was found 90.3912 and 85.7612 respectively. The calculated t value was 1.999. The calculated t value was more than the tabulated t value at 0.05 level of significance. Private school student Educational Attitude was less than the Government school.

**Keywords:** Educational attitude, senior secondary students, private schools

### Introduction

Attitude is an expression of favor or disfavor toward a person, place, thing, or event (the attitude object). Prominent psychologist Gordon All port once described attitudes "the most distinctive and indispensable concept in contemporary social psychology. Attitude can be formed from a person's past and present. Attitudes include attitude measurement, attitude change, consumer behavior, and attitude-behavior relationships.

Attitude are formed by people as a result of some kinds of learning experience if the experience is favorable a positive attitude is found and vice versa. The attitude people hold can frequently influence the way they act in person and larger situation. For this reason, administrators, psychologists and sociologists are concerned with attitude development, how they affect behavior and how they can be changed. When we relate the education with attitude that's meaning is children attitude about education. They were interested in education. Others they like or dislike.

The children of today are gearing up to become adult citizens of tomorrow. The growth is parallel to the future of our country, reflected through quality of the present education system. A school must stimulate curiosity in the young, impressionable minds and equip them with tools to be better human beings

### Objective of study

To compare the educational attitude of senior secondary students of Government and Private Schools.

### Definition and explanation of the terms

**Attitude:** to a person belief, interest, and behavior about particular thing.

**Educational Attitude:** Refers to the interest of the student about taking education.

### Hypothesis

There may be a significant difference of educational attitude between senior secondary students of government & private sector.

**Procedure and Method**

Sampling: The present study was conducted on eighty (80) students. Forty (40) students was taken from government school and other forty (40) was taken from private school. Convenience sampling method was used to collect the information from Senior Secondary School, Gandhi Camp, Jalandhar and second was Seth Hukam Chand Sen. Sec. School, Jalandhar.

**Method**

To collect the data for the present study investigator personally visited different school at Jalandhar city. Educational scale towards education by Dr. S.L. Chopra was used to collect the information. At time of distribution of the questionnaire, first the instruction were read for the subject and proper explanation was given where required by the subject

**Analysis of Data**

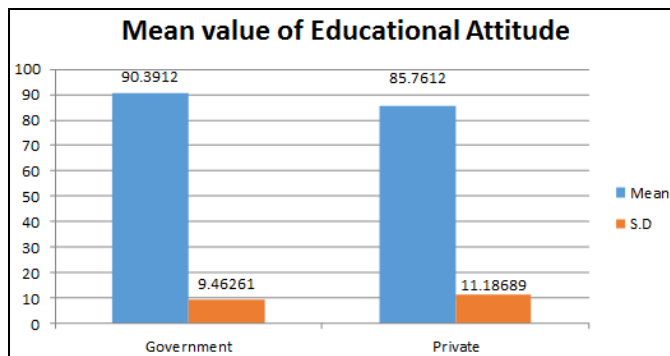

In the present study analysis and interpretation of the data and result obtained through the application of statistics. The part is devoted to the comparative result educational attitude of government and private school. The study had been analyzed with help of mean, SD and comparison between groups was done with the help of 't' test for equality of means. Statistical Description of mean, SD and 't' test value of Educational Attitude of Government Sector and Private Sector School students

**Table 1:** Showing mean score of Educational Attitude of Government Sector and Private Sector School students

Sectors	N	Mean	S.D	DF	t- Value
Government Sector	40	90.3912	9.46261	78	1.999
Private Sector	40	85.7612	11.18689		

\*Significant at 0.05 level

Table 1 reveals that the mean score of Government and Private Sector School population was found 90.3912 and 85.7612 respectively. The calculated t value was 1.999. The calculated t value was more than the tabulated t value at 0.05 level of significance. Cal. "t" (=1.999) > 't' .05 (df=78) (=1.66). The p value is 0.024573 which is higher than the significant value 0.05. The significant difference was observed. The result indicates that subjects which are in Private sector their Educational Attitude level was low comparison to Government Sector School students.

**Fig 1:** Graph showing mean score of Educational Attitude of Government Sector and Private Sector School students

Finding t-test for equality for Means employed to find out the significance difference. The significance level was set at 0.5 levels. There was significant difference in educational attitude

between senior secondary students of government & private sector. The result indicates that subjects which are in Private sector their Educational Attitude level was low comparison to Government Sector School students. Thus the hypothesis is accepted.

**Conclusion**

The finding of the study can be concluded as under Private sector their Educational Attitude level was low comparison to Government Sector School students.
